### Introduction of Project

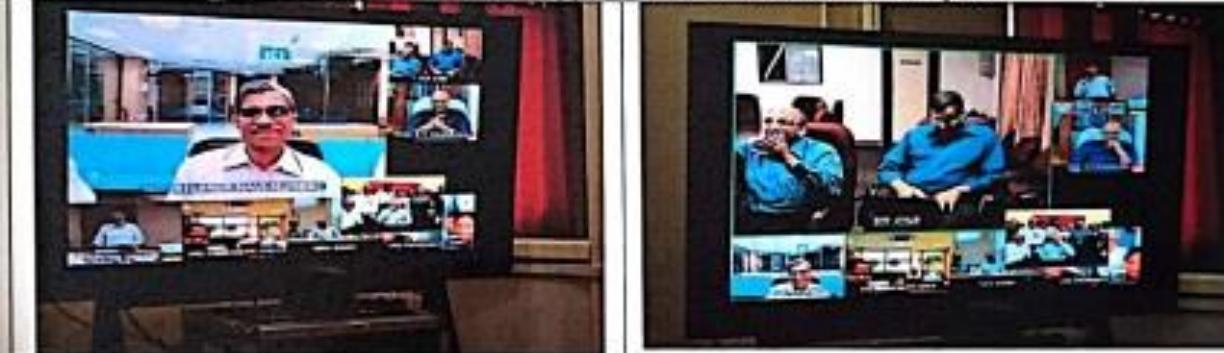

Till date many attempts have been made to improve the social and economic status of the rural areas. However, disparity exists between urban and rural schools with respect to level of exposure to the state-of-the-art knowledge. There is need for connecting the students from rural India to this knowledge base which is possible by high speed NKN connectivity. However, it will not be feasible to connect the rural schools through NKN due to high Capital and Operational & Maintenance cost. This cost can be minimized by connecting various schools through Wi-Fi to centre having various technical facilities along with NKN connectivity which can promote ICT enabled education and provide exposure and interaction to the rural students with outside world. There is need for working towards providing the benefit of NKN to the last end of the society. As part of this mission the project on "ICT Enabled School Education in Rural Areas around 15-20kms from NKN Node" was proposed to Rajeev Gandhi Science & Technology Commission, Mumbai and subsequently sanctioned. Further, this connectivity is utilized for dissemination of OER (Open Education Resources) to the students from the rural schools.

NKN facility along with required infrastructure and skilled man power is already available at SVERI, Pandharpur, SVERI, being located in rural area and involved in education sector, has taken the responsibility of actively participating in "*ICT Enabled School Education in Rural Areas around 15-20kms from NKN Node*". This pilot project demonstrates one of the important uses of NKN to the rural education sector.
